Abstracts

Pharmaceutical Logistics is the logistics of pharmaceuticals, medical and surgical supplies, medical devices and equipment, and other products needed to support doctors, nurses, and other health and dental care providers. Because its final customers are responsible for the lives and health of their patients, medical logistics is unique in that it seeks to optimize effectiveness rather than efficiency. Medical logistics functions comprise an important part of the health care system: after staff costs, medical supplies are the single most expensive component of health care. To drive costs out of the health-care sector, medical logistics providers are adopting supply chain management theories.
