Abstracts

Plastic pallets are cost effective than wooden pallets as they are durable and resistant to damage. Manufacturers and distributors are preferring plastic pallets for shipments as they are 30% lighter and 42% more durable than wood. This helps in less wear and tear on equipment during transportation and as it is lighter, it reduces the cost of shipment and transportation by around 50%. The proper utilization of plastic pallets also minimizes costs with respect to floor space, load weight, labor and sanitization, and helps in cutting the shipment expenditures and saving time. Also, factors like decrease in product breakage due to pallet damage, drop in cleaning expenses, decline of repacking costs and problem-free disposable system significantly contributes to the growing applications of plastic pallets in the logistics section of various industries like, grocery, pharmaceutical and automotive.
