Abstracts

This report studies the Switch Mode Power Supply Transformers (SMPS Transformers) market, which is transformers for switching power supplies, using in a regulated power supply and function to step up or step down voltage or current, and/or provide isolation between the input and output side of a switch mode power supply. On the primary side of a switch mode transformer, the duty cycle (on time) of the input voltage waveform is varied (switched) to deliver a constant output voltage over varying load conditions. Switch Mode Power Supply Transformers (SMPS transformers) are designed to operate at frequencies of 10 kHz to 1 MHz Switch mode transformer (switch mode power supply transformer) power levels now extend into the 50 kilowatt range
