Time is not just an extraneous network service. Accurate time is essential to determining the order in which events occur and is a fundamental aspect of transaction integrity, logging/auditing, troubleshooting and forensics. Accurate, reliable time is necessary for financial and legal transactions, transportation and distribution systems, database management and many other applications involving widely distributed resources. Network time protocol by far, the most widely used and accepted method for maintaining accurate time across entire networks is an implementation of the network time protocol (NTP). NTP is one of the oldest, most-used protocols on the Internet and is built on the Internet Protocol (IP) and User Datagram Protocol (UDP). It is specifically designed to maintain time accuracy and reliability, even when used over typical Internet paths involving multiple gateways and unreliable networks. This report studies the NTP server market.
