## Abstracts

According to our (Global Info Research) latest study, the global Nucleic Acid Transfection Reagents market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Nucleic acid transfection reagents are used to transfect exogenous nucleic acids (such as DNA, RNA, etc.) into target cells in vitro cell culture experiments. Nucleic acid transfection reagents can be used for experiments such as gene overexpression or gene silencing, helping researchers study the function and regulatory mechanisms of target genes. By transfecting exogenous DNA or RNA, gene expression or inhibition can be achieved, thereby studying its role in cell biology, biochemistry, and pathophysiology. In the process of drug development, nucleic acid transfection reagents can be used to evaluate the impact of drugs on specific genes or signaling pathways, thereby screening candidate drugs with potential therapeutic effects. In addition, it can also be used for targeted therapy research, such as gene therapy and RNA interference (RNAi) therapy.
