Abstracts

According to our (Global Info Research) latest study, the global Objective Lameness Evaluation System market size was valued at US\$ 50.21 million in 2025 and is forecast to a readjusted size of US\$ 89.98 million by 2032 with a CAGR of 8.8% during review period.

In 2024, the global production of objective lameness evaluation systems was estimated at 800-1500 units, with an average selling price of approximately US\$15,000-80,000 per unit, a gross profit margin of about 75%, and a single production line capacity of approximately 100 units per year. Objective lameness assessment systems significantly improve the accuracy, repeatability, and sensitivity of lameness diagnosis by digitizing and objectifying gait analysis, providing veterinarians with a powerful decision support tool and ultimately contributing to improved animal welfare and athletic performance. Objective lameness assessment systems utilize sensors, motion capture technology, and computer algorithms to quantify, analyze, and assess the gait of animals (primarily horses, but also including dogs and cattle) to detect and measure the degree of lameness. Their core principle is to replace subjective human judgment with objective, repeatable data, thereby providing more accurate and consistent diagnostic results. The upstream of objective lameness assessment systems mainly consists of core component and software suppliers (such as sensor chips and algorithm libraries), the midstream consists of system manufacturers that integrate technology and manufacture equipment, and the downstream consists of end-user channels for application and services (such as veterinary hospitals and racetracks). The demand stems fundamentally from the growing need for precision veterinary medicine downstream: driven by the need for downstream veterinary hospitals to improve diagnostic accuracy, the horse racing industry to pursue competitive performance and animal welfare, and

research institutions to conduct in-depth biomechanical research. The ultimate goal is to achieve the objectification, quantification, management, and early intervention of animal lameness problems.
