Octopus Tissue Stabilizers is a medical device mainly used in cardiac surgery and other fields. Through special design and mechanism, such as suction cups and clamps, it firmly absorbs or clamps tissues like octopus tentacles, keeps them stable during surgery, reduces displacement caused by heart beats, respiratory movements or surgical operations, and provides a stable operating platform for delicate surgical operations. In operations such as off-pump coronary artery bypass grafting, the use of Octopus Tissue Stabilizers can avoid a series of complications caused by the use of an extracorporeal circulation machine, reduce the degree of trauma to the patient's body, and help the patient's recovery after surgery.
