The offset dryer is a supporting equipment designed for offset printing machines. The offset dryer is a machine specially used for drying printed materials, which plays a vital role in the offset printing process. It can quickly dry the ink on the surface of the printed material, thereby ensuring the quality and production efficiency of the printed material. The working principle of the offset dryer is mainly to use high-temperature hot air flow to quickly dehydrate and dry the printed material. The high-temperature hot air generated by the heating device is blown on the surface of the printed material to quickly evaporate the solvent in the ink, thereby achieving the purpose of drying. At the same time, the hot air can also accelerate the air flow on the surface of the printed material and improve the drying efficiency. Offset dryers are widely used in various printing fields, especially high-end packaging printed materials, such as cigarette label packaging, gift packaging, wine packaging, etc. These printed materials have high requirements for drying effects and need to dry the ink quickly and evenly to ensure the quality and appearance of the printed materials.
