## Abstracts

According to our (Global Info Research) latest study, the global On-site Voltage Calibration Services market size was valued at US\$ 1161 million in 2025 and is forecast to a readjusted size of US\$ 1668 million by 2032 with a CAGR of 5.3% during review period.

To address the problems of long downtime, cumbersome processes, and easy interruption of continuous measurement data in the field caused by the need for voltage measurement equipment to be sent back and forth to laboratories for calibration, on-site voltage calibration services have emerged. With the development of portable high-precision standard sources and intelligent calibration technology, this service has matured in the metrology assurance field since the late 20th century, and has now formed a flexible service system integrating mobile laboratory calibration, online real-time calibration, and remote data management. This service is widely used in situations where equipment cannot or should not be disassembled, such as power transmission and distribution, rail transit, communication base stations, industrial production lines, and scientific research sites. It can achieve rapid response, in-situ calibration, and minimized downtime, significantly improving equipment availability and ensuring the continuous reliability of on-site measurement data. It is an important technical means to support the stable operation and efficient maintenance of critical systems.
