Optical Metal Mirrors are reflective surfaces made from metal materials, commonly used in optical systems and devices to reflect light across various wavelengths, including visible, ultraviolet (UV), and infrared (IR). These mirrors are made by coating a metal surface with a reflective layer, often through processes like sputtering, evaporation, or electroplating. Optical metal mirrors are favored for their durability, high reflectivity, and ability to withstand challenging environmental conditions, making them ideal for many high-precision applications in science, industry, and technology.
