An oral fluid test system is a non-invasive diagnostic tool designed to detect substances or biomarkers in saliva for applications such as drug testing, disease diagnosis, and health monitoring. This system typically includes a saliva collection device and a testing unit, which can either be a portable analyzer or a laboratory-based system. Oral fluid tests are easy to administer, require no specialized training, and provide rapid results, making them ideal for workplace drug testing, roadside screening, and clinical use. Highly sensitive and accurate, these systems can detect a wide range of substances, including drugs, hormones, and infectious agents, offering a convenient and efficient alternative to blood or urine testing.
