## Abstracts

According to our latest research, the global Oral Restorative Membranes and Bone Graft Materials market size will reach USD million in 2031, growing at a CAGR of %over the analysis period.

Oral restorative membranes and bone graft materials are two representative types of dental restoration materials, primarily used for bone grafting when the alveolar bone conditions are insufficient during dental implant procedures. Bone graft materials are used for filling and repairing defects or insufficient bone volume in the jawbone, while oral restorative membranes are used for repairing superficial soft tissue defects in the oral cavity. The use of oral restorative membranes can effectively enhance the retention and stability of dental implants.
