According to our latest research, the global Oral Veterinary Dermatology market size will reach USD 7609 million in 2031, growing at a CAGR of 6.6% over the analysis period.

Oral veterinary dermatology focuses on the diagnosis and treatment of skin conditions in animals through the use of oral medications. This branch of veterinary medicine addresses a wide range of dermatological issues, including allergies, infections, autoimmune diseases, and parasitic infestations. Oral treatments, such as antibiotics, antifungals, antihistamines, and immunosuppressants, are commonly used to manage these conditions, providing systemic relief that topical treatments alone may not achieve. By targeting the underlying causes of skin disorders, oral veterinary dermatology plays a crucial role in improving the health, comfort, and overall quality of life for pets and other animals.
