According to our (Global Info Research) latest study, the global ORing Controller market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

An ORing controller, also known as an ideal diode controller, is a device that creates near perfect diodes using signal or back-to-back N-channel or P-channel MOSFETs. They are used in applications that require a low loss OR connection of multiple power supplies while minimizing the losses associated with the connection. This improves the efficiency of the system, lowers the power dissipated as heat and reduce the voltage drop across the 'OR'ing circuit.

ORing controllers have a promising market outlook in the field of industrial automation. The market is substantial and continuously expanding, with increasing sales of ORing controllers. They find specific uses in network communication, data transmission, and network security, meeting the reliability and stability requirements of industrial equipment. In the future, with the advancement of Industry 4.0 and the Internet of Things (IoT), ORing controllers will continue to see more opportunities, especially in the domains of smart manufacturing and smart cities, with their development potential being immeasurable.
