According to our (Global Info Research) latest study, the global ORing MOSFET Controller market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

An ORing controller, also known as an ideal diode controller, is a device that creates near perfect diodes using signal or back-to-back N-channel or P-channel MOSFETs. They are used in applications that require a low loss OR connection of multiple power supplies while minimizing the losses associated with the connection. This improves the efficiency of the system, lowers the power dissipated as heat and reduce the voltage drop across the 'OR'ing circuit.

The ORing MOSFET Controller is a crucial component for power management and battery protection, widely employed across the electronics industry. With a significant market size, its demand continues to grow as electronic devices become increasingly ubiquitous. Key sales targets for ORing MOSFET controllers include electronic product manufacturers, communication equipment manufacturers, and industrial automation sectors. Specific uses encompass power switching, battery charge-discharge management, and system fault protection. In the future, as smart technologies rise and electronic devices evolve, ORing MOSFET controllers are poised for ongoing market opportunities, likely to become more integrated and intelligent to meet evolving power management demands.
