OTW balloon catheter, full name Over-The-Wire Balloon Dilatation Catheter, is an interventional medical device. OTW balloon catheters are usually composed of an inner shaft and an outer shaft, with an annular gap between the two for balloon expansion and deflation. There is a cavity in the inner shaft for inserting the guide wire used in angioplasty, so that the entire balloon catheter can slide along the guide wire. The distal end of the catheter is equipped with a balloon, usually with an X-ray-proof marker, which is convenient for positioning and observation during the operation.

OTW balloon catheters are mainly used for balloon dilatation surgery of coronary artery stenosis or bypass graft stenosis to improve myocardial perfusion. In addition, OTW balloon catheters also have certain application value in the treatment of CTO lesions (chronic total occlusive lesions), ventricular septal chemical ablation, and transluminal pressure measurement and blood sampling.
