Ortho-K contact lenses, also known as corneal reshaping lenses or overnight lenses, are designed to reshape the cornea temporarily while the wearer sleeps. This results in improved vision during the day without the need for corrective eyewear or surgery. The prevalence of myopia has been increasing globally, especially among younger populations due to factors like increased screen time and reduced outdoor activities. Ortho-K lenses provide a way to manage and potentially slow down the progression of myopia in children and teenagers. Many individuals prefer non-invasive methods for vision correction. Ortho-K lenses offer an attractive option as they don't require surgery and can be easily adjusted or discontinued if necessary.
