Abstracts

According to our (Global Info Research) latest study, the global Oxidised Regenerated Cellulose Haemostatic market size was valued at US\$ 454 million in 2024 and is forecast to a readjusted size of USD 695 million by 2031 with a CAGR of 6.3% during review period.

The oxidised regenerated cellulose haemostatic market is expected to witness significant growth in the coming years. This growth can be attributed to the increasing prevalence of chronic diseases, rising number of surgeries, and growing geriatric population. The major sales regions for oxidised regenerated cellulose haemostatic products include North America, Europe, Asia Pacific, Latin America, and the Middle East and Africa. North America and Europe are currently the largest markets for these products, owing to the well-established healthcare infrastructure and high healthcare expenditure in these regions. However, the Asia Pacific region is expected to witness the highest growth rate during the forecast period, due to the increasing healthcare spending, rising awareness about advanced wound care products, and growing surgical procedures in countries like China and India. The oxidised regenerated cellulose haemostatic market is highly competitive and fragmented, with the presence of several key players. These players are focusing on product innovation, strategic collaborations, and mergers and acquisitions to gain a competitive edge in the market. The market concentration is expected to increase in the coming years, with larger companies acquiring smaller players to expand their product portfolio and geographical presence. There are several opportunities in the oxidised regenerated cellulose haemostatic market. The increasing adoption of minimally invasive surgeries, advancements in wound care technologies, and rising demand for cost-effective and efficient haemostatic products are expected to drive market growth. Additionally, the

growing geriatric population and rising prevalence of chronic diseases, such as cardiovascular diseases and cancer, are creating a significant demand for haemostatic products. Despite the growth prospects, there are certain challenges faced by the oxidised regenerated cellulose haemostatic market. The high cost of these products, stringent regulatory requirements, and the availability of alternative haemostatic agents are some of the challenges that can hinder market growth. Moreover, the lack of awareness about advanced wound care products in developing regions can also pose a challenge to market expansion.
