Pedestrian Pallet Stacker is a mechanical device designed for material handling and stacking, and is widely used in warehousing, logistics and manufacturing industries. The device is usually powered by electricity, and the operator controls the travel and lifting functions of the stacker by walking. Its main task is to move palletized goods from the ground to a higher position, or lower them from a high place to the ground. The pedestrian pallet stacker can efficiently stack and pick up goods through the electric-driven fork arm lifting system, and is easy to operate and suitable for narrow space operations.
