According to our (Global Info Research) latest study, the global Percutaneous Transforaminal Endoscopic Discectomy Endoscopic System market size was valued at US\$ 498 million in 2024 and is forecast to a readjusted size of USD 792 million by 2031 with a CAGR of 6.9% during review period.

Endoscopic spine surgery can be perceived as a surgical approach utilizing micro-sized incisions (less than 1-inch) and minor tubular systems along with an endoscope to envision the surgical field. Whilst endoscopic surgical techniques are typically used to treat other areas of the body (for instance, gastrointestinal), advancements in optics, envisioning of tissues, and spinal imaging make ESS a surgical treatment alternative for several patients. The Endoscope is introduced through the working sleeve. With resection instruments, the herniated disc material is removed under direct vision. Confirmation of decompression & free neurological structures are confirmed under direct vision.

According to our research, the global market for medical devices is estimated at US\$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years. The global healthcare spending contributes to occupy 10% of the global GDP and is continuously rising in recent years due to the increasing health needs of the aging population, the growing prevalence of chronic and infectious diseases and the expansion of emerging markets. The medical devices market plays a significant role in the healthcare industry. The market is driven by several factors, including the increasing demand for advanced healthcare services globally, advancements in medical technology, growing geriatric population, rising healthcare expenditure, and increasing

awareness about early disease diagnosis and treatment.
