Peripheral biomaterial Grafts are medical devices used in the treatment of peripheral vascular diseases, specifically designed to restore blood flow in cases of peripheral vascular stenosis or occlusion. These grafts are implanted at the site of the lesion and are engineered to be compatible with the human body, providing support and structure while promoting healing and regeneration of the vascular tissue. They are an essential part of minimally invasive vascular surgery and are being developed with advanced biomaterials to enhance their adaptability and long-term stability within complex vascular anatomies.
