A permanent linerless label is a specialized self-adhesive label that lacks the traditional backing paper (liner). In the design of these labels, an innovative approach is adopted to prevent the adhesive surface from sticking to itself during storage and handling. This is often achieved through unique material combinations and manufacturing techniques. The adhesive used in permanent linerless labels is formulated to offer a strong, long-lasting bond when applied to a wide range of substrates, such as various types of packaging materials, containers, or products. These labels are typically produced in a continuous roll format, enabling efficient printing and dispensing processes. They are highly valued in industries like logistics, warehousing, and manufacturing for applications such as product identification, tracking, and inventory management, due to their convenience, durability, and the ability to reduce waste associated with traditional labels that have liners.
