According to our (Global Info Research) latest study, the global PETG Cell Roller Bottles market size was valued at US\$ 33.3 million in 2024 and is forecast to a readjusted size of USD 50.1 million by 2031 with a CAGR of 6.1% during review period.

PETG Cell Roller Bottle is used to grow and store cell cultures. Placed on a roller, roller bottles can slowly rotate and bathe cells that are attached to the inner surface of the bottle.

The PETG Cell Roller Bottle is a laboratory vessel used in cell culture applications. They are made from PETG, which stands for modified polyethylene terephthalate. PETG is a thermoplastic polyester that combines the properties of polyethylene terephthalate (PET) with ethylene glycol modifications to make it more flexible and impact-resistant than standard PET. The PETG surface provides good cell adhesion and promotes cell adhesion and proliferation during cell culture. PETG is transparent, allowing researchers to easily monitor and observe cell growth and behavior inside the flask. PETG is more impact resistant than standard PET, reducing the risk of breakage during handling. PETG is compatible with many cell culture media, buffers and reagents commonly used in cell culture experiments.
