According to our (Global Info Research) latest study, the global Pharmaceutical Grade Isopropyl Myristate market size was valued at US\$ 15.47 million in 2025 and is forecast to a readjusted size of US\$ 21.81 million by 2032 with a CAGR of 5.0% during review period.

Pharmaceutical grade isopropyl myristate (IPM) is a colorless, oily liquid formed by the esterification of myristic acid and isopropanol. It is an excellent polar emollient, solvent, and penetration enhancer, improving the absorption and efficacy of drugs in the skin. It is widely used in transdermal formulations, ointments, creams, and other topical medications. The upstream of its supply chain mainly consists of myristic acid and isopropanol. Myristic acid is usually derived from the decomposition of natural palm kernel oil or coconut oil, which means that the upstream supply is significantly affected by the yield of tropical oil crops and international oil and fat market prices. The global sales volume in 2025 is estimated to be approximately 7,500 tons, with an average market price of approximately 2,000 RMB/ton. The industry's gross profit margin is approximately 12-20%.
