Abstracts

According to our (Global Info Research) latest study, the global Phenyl Modified Silicone Oil market size was valued at US\$ 115 million in 2025 and is forecast to a readjusted size of US\$ 169 million by 2032 with a CAGR of 5.7% during review period.

In 2025, the global production of phenyl-modified silicone oil was approximately 7,800 tons, with an average selling price of around US\$14,270 per ton. The scale of single-line production capacity varies depending on the production process and investment scale, with an average gross profit margin of approximately 20-30%. Phenyl-modified silicone oil is a special type of silicone oil that introduces phenyl functional groups into the siloxane main chain. It retains the excellent high and low-temperature resistance and chemical stability of basic silicone oil, while the introduction of phenyl groups significantly improves its heat resistance, lubricity, film-forming properties, high gloss, breathability, and water resistance, and provides a refreshing, non-greasy feel. It is commonly used in high-end cosmetics and industrial applications to improve product performance and user experience.

The upstream core raw materials for phenyl-modified silicone oil mainly include phenylchlorosilane monomers and methylchlorosilane synthesized by the direct method. The downstream industry chain is highly focused on cutting-edge industrial fields that demand stringent material performance, including aerospace (high-temperature sealing and lubrication), electronics (insulating thermal conductivity and optical packaging), and cosmetics (color cosmetics gloss film-forming agents).
