According to our (Global Info Research) latest study, the global PID-Based Multigas Detectors market size was valued at US\$ 1235 million in 2025 and is forecast to a readjusted size of US\$ 1914 million by 2032 with a CAGR of 6.4% during review period.

In 2025, global PID-Based Multigas Detectors production reached approximately 0.6 million units, with an average global market price of around US\$ 2000 per unit. Annual production capacity is 0.8 million units. Gross Profit Margin: 35%. PID-Based Multigas Detectors are portable or fixed gas detection devices that use Photoionization Detector (PID) technology in combination with other gas sensors to simultaneously detect volatile organic compounds (VOCs) and multiple toxic or combustible gases. The PID-based multigas detector industry chain includes upstream sensor and component suppliers, midstream manufacturers assembling and calibrating detectors, and downstream distributors and industrial end users in oil & gas, chemicals, environmental monitoring, and safety services. PID-based multigas detectors are valued for their high sensitivity to VOCs, fast response, and multi-gas coverage, making them a reliable safety tool in high-risk industrial environments.
