## Abstracts

According to our (Global Info Research) latest study, the global Piezoelectric Polymer Film market size was valued at US\$ 28.04 million in 2025 and is forecast to a readjusted size of US\$ 35.69 million by 2032 with a CAGR of 3.7% during review period.

Piezoelectric polymer film refers to flexible films made from polyvinylidene fluoride (PVDF) or its copolymers such as P(VDF-TrFE), which exhibit piezoelectric properties after poling. These films produce electrical charge when mechanically stressed, offering advantages such as lightweight construction, flexibility, wide frequency response, and high output voltage compared to ceramic piezoelectric materials. They are widely used in sensors, actuators, energy harvesting devices, flexible electronics, and medical applications, with customizable thickness and electrode integration options. In 2025, global piezoelectric polymer film sales reached approximately 6,362 Sq.m, with an average price of 4,284 US\$/Sq.m, and gross margin is around 30%-50%.

The piezoelectric polymer film industry chain starts upstream with fluoropolymer raw materials such as PVDF and its copolymers, along with solvents and electrode metals; the midstream focuses on film casting or stretching, molecular orientation, poling, and electrode deposition to produce functional piezoelectric films; downstream applications span sensors, actuators, medical devices, wearable electronics, energy harvesting systems, and automotive and industrial monitoring markets.
