According to our latest research, the global Pipe Grooving Services market size will reach USD million in 2031, growing at a CAGR of %over the analysis period.

Pipe grooving services typically involve the process of cutting grooves into pipes to facilitate joining or connections. When performing a cut groove, pipe material is removed from the exterior diameter of the pipe, cutting a groove, which can be attached to either side of a grooved coupling. It is a quick and cost-effective way to mechanically join pipes. It can be used on different types of pipe, and on many sizes and wall thicknesses. These grooves allow for easier assembly and better sealing in various piping systems, particularly in industries like plumbing, HVAC, and fire protection.
