According to our (Global Info Research) latest study, the global Plant Tissue Analysis Service market size was valued at US\$ 186 million in 2024 and is forecast to a readjusted size of USD 247 million by 2031 with a CAGR of 3.4% during review period.

Plant Tissue Analysis Service** is a service that uses laboratory testing technology to quantitatively analyze various nutrients, elements, and chemicals in plant samples. This service helps farmers, gardeners, and researchers understand the nutrients absorbed and used by plants during growth, assess the health of plants, and provide a basis for decision-making for scientific planting. Plant tissue analysis often uses chemical analysis, spectral analysis, or mass spectrometry to detect macroelements (such as nitrogen, phosphorus, potassium) and trace elements (such as iron, zinc, copper) in plant samples, as well as other substances that may affect plant growth (such as heavy metals, pesticide residues, etc.). This service can provide a scientific basis for agricultural practices such as soil improvement, fertilization management, and pest and disease control.
