According to our (Global Info Research) latest study, the global Plastic Gravure Printing Machine market size was valued at US\$ 366 million in 2024 and is forecast to a readjusted size of USD 454 million by 2031 with a CAGR of 3.1% during review period.

Plastic gravure printing machine is a printing equipment that uses gravure printing method and is specifically used for printing plastic materials such as plastic film and plastic sheet. The printing principle of gravure printing is mainly based on the characteristic of concave graphic parts on gravure printing plates. During printing, ink is filled into the depressions of the graphic and textual parts of the printing plate, while the non graphic parts of the plate are kept clean. Then, the excess ink on the surface of the printing plate is scraped off with a scraper, leaving only the ink in the concave part. When the printing plate comes into contact with the substrate (such as plastic film), the ink on the graphic and textual parts of the gravure printing plate is transferred to the substrate through a certain pressure, thus completing the printing process.
