A Plastic trocar is a medical device used in minimally invasive surgery (MIS), such as laparoscopic procedures. It consists of a sharp-pointed instrument encased in a tube that allows surgeons to penetrate body tissues and provide access for surgical instruments or cameras. Unlike reusable trocars, disposable ones are designed for single use, reducing the risk of cross-contamination and the need for sterilization. They come in various sizes and are typically made from lightweight, durable materials like plastic. Disposable trocars play a critical role in enhancing surgical safety and efficiency.
