Point Cloud Processing Tool is a computing software specially designed for processing and analyzing 3D spatial data. It is usually applied to point cloud data obtained by laser scanning (such as LiDAR) or photogrammetry technology. Point cloud is a collection of a large number of points with spatial coordinates (X, Y, Z) and other attributes (such as color, intensity, etc.), representing the 3D geometry of an object or scene. Point cloud processing tools can filter, align, reconstruct, model, extract features and visualize these data, thus providing key data support for engineering design, architecture, geographic information system (GIS), cultural heritage protection and other fields.
