Polycarbonate (PC) siloxane copolymer for new energy vehicles is a high-performance thermoplastic material that combines the strength and transparency of polycarbonate with the flexibility and weatherability of siloxane. This copolymer is specifically designed to meet the demanding requirements of new energy vehicles, such as electric vehicles and hybrid vehicles. It provides high impact resistance, optical clarity, and improved thermal stability, making it ideal for various automotive applications like exterior and interior parts, display covers, and lighting components.

Electrification of Vehicles:

The increasing adoption of new energy vehicles, driven by stricter environmental regulations and growing consumer preference for electric and hybrid cars, has led to higher demand for advanced materials like PC siloxane copolymers. In the field of new energy vehicles, polycarbonate (PC) siloxane copolymer is mainly used in electric vehicle charging guns.

Growth in Electric Vehicles:

With the rapid expansion of the electric vehicle market, there is an increasing demand for high-performance, durable materials. PC siloxane copolymers are gaining traction due to their enhanced properties like impact resistance and UV stability.

Cost Concerns:

The high cost of raw materials and processing for PC siloxane copolymers can make them more expensive than traditional automotive materials, potentially limiting their

widespread adoption, especially in mass-market NEVs.
