The polyethersulfone hollow fiber membrane hemodialyzer is a medical device used for blood purification, mainly used for hemodialysis treatment of patients with chronic renal failure. The device uses polyethersulfone materials to make hollow fiber membranes. This material has excellent chemical stability, mechanical strength and biocompatibility, enabling it to efficiently and stably filter toxins and waste in the blood. The hemodialyzer draws the patient's blood from the body through a closed circulation system, filters it through the hollow fiber membrane, and then returns it to the body.
