According to our (Global Info Research) latest study, the global Polystyrene Cell Roller Bottles market size was valued at US\$ 32.7 million in 2024 and is forecast to a readjusted size of USD 59.7 million by 2031 with a CAGR of 9.1% during review period.

Cell Roller Bottle is used to grow and store cell cultures. Placed on a roller, roller bottles can slowly rotate and bathe cells that are attached to the inner surface of the bottle. A polystyrene cell roller bottle is a laboratory appliance used for cell culture. It is usually made of polystyrene, has a smooth surface and good cell adhesion, and is suitable for cell proliferation and culture. The polystyrene surface has good cell adhesion, which is conducive to cell adhesion and proliferation in the bottle. Polystyrene cell roller bottles usually have a cylindrical shape and can be placed on a roller bottle turret for rotational culture to provide better oxygen and nutrient supply and promote cell growth. Roller bottles usually have a larger volume and are suitable for large-scale cell culture and production. The polystyrene cell roller bottle is sterilized to ensure the sterility of the device and avoid contamination by bacteria and other microorganisms.
