According to our (Global Info Research) latest study, the global Polytetrafluoroethylene (PTFE) Fine Powder market size was valued at US\$ 1091 million in 2024 and is forecast to a readjusted size of USD 1555 million by 2031 with a CAGR of 5.2% during review period.

Polytetrafluoroethylene (PTFE) fine powder is a high-performance thermoplastic polymer powder with extremely fine particle sizes. It is composed of repeating units of tetrafluoroethylene monomers (-CF₂-CF₂-) linked together to form long molecular chains. PTFE fine powder exhibits unique physical and chemical properties due to its highly fluorinated structure. It has an extremely low coefficient of friction, excellent chemical resistance, high thermal stability, and good electrical insulation properties. These characteristics make it widely used in various industries. In the manufacturing of seals and gaskets, its low friction coefficient helps reduce wear and tear. In the coating industry, it can be used to create non-stick coatings on cookware and other surfaces. In the electrical field, its good insulation properties are utilized for insulating materials. Additionally, it is also applied in some high-precision manufacturing processes due to its fine particle size and uniform distribution.
