A Popcorn Machine (also called a popcorn popper) is a machine used to pop popcorn. Since ancient times popcorn has been a popular snack food, produced through the explosive expansion of kernels of heated corn (maize). Commercial large-scale popcorn machines were invented by Charles Cretors in the late 19th century. Many types of small-scale home methods for popping corn also exist.

Commercial popcorn machines are commonly found in movie theaters and carnivals, producing popcorn in a pan of hot oil, which has approximately 45% of its calories derived from fat. Hot air popcorn poppers appeared for Offline Sales in the late 1970s, which produce popcorn with only 5% of its calories derived from fat. The majority of popcorn sold for home consumption is now packaged in a microwave popcorn bag for use in a microwave oven.

In the United States, Presto has the largest share in popcorn machine market, followed by Gold Medal Products. In terms of sales channels, offline sales accounted for the highest proportion, accounting for 66% in 2019, while online sales were slightly smaller, accounting for 34%
