Porcine pericardium membrane refers to a biological material derived from the thin, tough membrane that surrounds the heart of a pig. This membrane is commonly used in medical and surgical procedures as a biomaterial due to its unique properties. Porcine pericardium membrane is often processed to remove cells and antigens, leaving behind a collagen-rich matrix that is biocompatible and has low immunogenicity.

Technological innovation: With the continuous advancement of science and technology, the absorbable pericardium industry will continue to promote technological innovation and improve the performance, efficiency and reliability of equipment. For example, by developing more advanced materials and production processes to improve the safety and effectiveness of absorbable pericardial membranes. Market demand growth: With the continuous development of medical technology and people's increasing health needs, the market demand for absorbable pericardium will also continue to increase. Especially in the fields of cardiovascular and thoracic surgery, the demand for absorbable pericardium will further increase.
