According to our (Global Info Research) latest study, the global Pore Stickers market size was valued at US\$ 49390 million in 2024 and is forecast to a readjusted size of USD 69140 million by 2031 with a CAGR of 5.0% during review period.

Pore ??patches are beauty products designed specifically for cleaning pores. They are usually in the form of patches and contain absorbent ingredients such as activated carbon or sticky polymers. When used, the pore patches will fit tightly to the surface of the skin, especially to areas such as the nose and forehead where oil and blackheads are prone to accumulate. When the pore patches are removed, impurities such as oil, blackheads, and dirt on the skin surface can be removed, thereby temporarily cleaning and shrinking the pores. Pore patches are widely used in daily skin care routines and are suitable for oily and combination skin types, but frequent use may cause skin irritation or dilated pores.

As a skin care product that quickly cleans pores, pore patches are widely popular among consumers because they can instantly remove blackheads and oil. However, although pore patches can clean pores and improve the appearance of skin in the short term, their long-term effects and safety are controversial. Excessive use of pore patches may cause damage to the skin barrier and even aggravate pore dilation, especially irritating sensitive skin. Therefore, pore patches can be used as an occasional deep cleansing method, but should not replace daily gentle skin care procedures. In addition, the appropriate combination of subsequent moisturizing and pore-tightening products can effectively reduce its potential damage to the skin.
