Alternatively referred to as a universal port replicator, a docking station is a hardware device that allows portable computers to connect with other devices with little or no effort. Docking stations enable users with a laptop computer to convert it into a desktop computer when at the office or at home.

A docking station is an apparatus that fixes a portable device, such as a notebook or tablet, in a single location. This is done by sliding the device vertically and immobilizing it with a sliding lock mechanism. They fall into two general categories: vehicle docks/cradles and office docks. Both types enable easy one-step device docking and undocking without the need to connect or remove wires.
