According to our (Global Info Research) latest study, the global Portable RF Jammer market size was valued at US\$ 354 million in 2024 and is forecast to a readjusted size of USD 436 million by 2031 with a CAGR of 3.0% during review period.

An RF jamming system equipment' as known as a radio frequency jamming system, is a device that is used to block the reception or transmission of signals. It does this by creating its wave in the form of interference which is similar to the same wave and at the same frequency ranges that a telephone uses. With this, a telephone user will have to lose the signal he is using or have a major loss of signal quality.

A portable radio frequency jammer is a portable, handheld radio frequency jamming device used to jam or block wireless communication signals. This kind of equipment is usually designed to be small, light, easy to carry, and convenient to use in different places, such as meeting rooms, vehicles, public places, etc. The working principle of the portable radio frequency jammer is similar to that of other radio frequency jammers. By transmitting specific wireless interference signals, it interferes with the wireless communication signals in the target frequency band, making the target device unable to communicate normally. This device can interfere with multiple wireless communication technologies such as 2G, 3G, 4G, WiFi, GPS, Bluetooth, etc.
