Post-Operative Wound Dressings are sterile medical coverings applied to surgical wounds after an operation to protect the site from infection, promote healing, and absorb exudates. These dressings create a barrier against contaminants, maintain a moist environment conducive to tissue regeneration, and can include antimicrobial properties to reduce the risk of infection. They are designed to be gentle on healing skin, minimize pain during dressing changes, and support faster recovery by protecting the wound from physical damage or irritation. Post-operative dressings come in various forms, such as adhesive pads, gauze, or hydrocolloid dressings, tailored to different types of wounds and healing needs.
