According to our (Global Info Research) latest study, the global Powder ALD market size was valued at US\$ 155 million in 2024 and is forecast to a readjusted size of USD 256 million by 2031 with a CAGR of 7.4% during review period.

Powder ALD is a precision film deposition system that utilizes a unique chemical vapor deposition technology to achieve atomic-level film growth by precisely controlling the adsorption and desorption processes of reactants on the powder surface. The device is designed with accurate temperature control and gas flow control systems to ensure the uniformity and repeatability of the deposition process. Powder ALD is capable of high-quality film deposition at low temperatures, reducing the side effects of heat treatment, and it possesses the ability to control film thickness with high resolution and precision. Its working principle is based on self-limiting surface chemical reactions, where alternating introduction of two different reactant gases enables layer-by-layer stacking for film growth, thereby forming a uniform and dense film layer on the surface of powder particles. Powder ALD stands out for its superior film quality and precise process control, making it a high-end product in the field of film preparation technology.
