Abstracts

According to our (Global Info Research) latest study, the global Power and Lighting Distribution System market size was valued at US\$ 3830 million in 2025 and is forecast to a readjusted size of US\$ 5061 million by 2032 with a CAGR of 3.9% during review period.

Power and lighting distribution systems serve as low-voltage power distribution and lighting control platforms in buildings, factories, transportation hubs, and other locations. Through equipment such as distribution cabinets, circuit breakers, busbars, and lighting controllers, it rationally distributes electrical energy to power equipment (such as motors, air conditioners, and elevators) and lighting loads (such as lamps and emergency lighting). The system features overload protection, short-circuit protection, leakage protection, and intelligent monitoring functions. It solves problems such as uneven distribution of power and lighting loads, insufficient power supply reliability, and difficulties in energy consumption management, ensuring safe, stable, and energy-efficient operation of buildings and industrial sites. The average price of this product is approximately US\$20,000 per unit, with global sales of approximately 186,000 units.

Upstream components include copper, steel, circuit breakers, busbars, lighting controllers, and sensors; midstream components are power distribution system manufacturers and integrators, responsible for cabinet design, assembly, and intelligent integration; downstream components include buildings, industry, transportation, data centers, and medical facilities. Future trends include intelligentization (IoT remote monitoring), green energy saving (LED lighting and high-efficiency motors), and digitalization (energy management platforms). With urbanization and the development of smart buildings, power and lighting distribution systems will become an important

component of smart city infrastructure.
