According to our (Global Info Research) latest study, the global PPA High Temperature Nylon market size was valued at US\$ 1557 million in 2023 and is forecast to a readjusted size of USD 2053 million by 2030 with a CAGR of 3.5% during review period.

High temperature resistant nylon (PPA) is a heat-resistant polyamide that can be used in an environment of 150°C for a long time. The high temperature resistant nylons that have been industrially produced are mainly PA46, PA6T, PA9T, PA10T, etc. PPA has excellent dimensional stability in corrosive high temperature environments. When exposed to engine antifreeze for a long time at 130°C, it has better fatigue resistance and impact resistance, excellent strength and faster molding speed, providing a good material solution for components in automotive thermal management systems, such as thermostats, water inlets/outlets, electric water pumps, water pump impellers, air conditioning heater cores, etc. High temperature nylon PPA can meet their product requirements.

There are different types of PPA high-temperature nylon, and the performance of different types varies greatly. Among them, PA10T is a new type of nylon. Compared with other types of high-temperature nylon, PA10T has a melting point of up to 316°C, which is suitable for various high-temperature application scenarios. After modification, PA10T has been widely used in aerospace, large machinery, military industry, chemical industry, electronics and electrical, and automobile fields. In the automotive field, PA10T can be used to manufacture high-temperature resistant parts to help improve fuel efficiency and reduce emissions. In the field of electronics and electrical, its excellent heat resistance and electrical insulation properties make it an ideal material for manufacturing high-performance electronic components. In the field of aerospace, the lightweight and high-strength characteristics of PA10T make it an ideal choice to

replace traditional metal materials.

Globally, new high-temperature nylon PA10T companies mainly include KINGFA, Nantong Xinx, Evonik, Jiangmen Dezhongtai, Shenzhen Wote Advanced Materials, Shenzhen Sinowin New Materials, EMS Chemie Holding, UNITIKA, Shanghai Genius New Material, etc. Among them, Kingfa Technology has the largest output, accounting for nearly 50% of the global market share.

The global PA10T resin market is occupied by a few companies, among which Kingfa Technology is the first company in the world to achieve 5,000 tons/year PA10T industrialization, and currently leads the global market share. However, the global high-temperature nylon market is still dominated by a few international giants, including DuPont, EMS-GRIVORY, Intron, Arkema, Mitsubishi Chemical, Kuraray, etc. my country still has no representative international companies in this field. Overall. my country's high-temperature nylon production, new capacity, technological improvements, etc. are comparable to overseas companies, but there is still a big gap in profit margins, R&D investment, market reputation, etc.
