## Abstracts

According to our (Global Info Research) latest study, the global Precision Rotary Stage? market size was valued at US\$ 608 million in 2025 and is forecast to a readjusted size of US\$ 1065 million by 2032 with a CAGR of 8.3% during review period.

In 2025, global precision rotary stage production reached approximately 622 k units, the average price is 950 usd/unit. Precision rotary stage? is a kind of automatic precision component driven by motor, its core function is to realize precise angle rotation or tilting movement around a specific axis. At present, driven by industrial upgrading, intelligent manufacturing and cutting-edge technology development, the market demand for high-precision, automated motion control has soared, bringing broad business opportunities for automatic angle slides. Its core requirements stem from the urgent requirements for 'accurate angular positioning' in areas such as industrial automation (e.g., welding, workpiece posture adjustment in inspection), semiconductor manufacturing, laser processing, medical equipment, and new energy sources (e.g., solar tracking). The opportunity lies not only in the stock market for replacing traditional manual adjustment or low-end pneumatic solutions, but also in the incremental market that accompanies the growth of emerging industries such as humanoid robot joint drives, high-end CNC machine tools, precision optical inspection and aerospace simulation equipment. The specific business opportunities presented are: cost-effective standard products, customized solutions to meet specific industries, and system integrators integrating with linear modules to provide complete motion solutions, indicating that this field will continue to breed technological innovation and market growth points.

The annual production capacity of a single production line for automatic angle slides is typically between 10,000 and 30,000 units, with a gross profit margin of around 28%.

Downstream consumers of automatic angle slides include semiconductors (29%), robotics (20%), laser processing (25%), aerospace (12%), and others (14%).
