Preformed Tracheal Tubes are specialized medical devices designed for airway management, often used during surgeries or in critical care settings. These tubes are pre-shaped to fit the anatomical structure of the airway, reducing the likelihood of kinking or occlusion. They are typically available in oral or nasal versions, with different angulations suited for specific patient needs. Made from materials like PVC or silicone, preformed tracheal tubes can be cuffed or uncuffed, with cuffed versions providing a seal to prevent air leakage and aspiration. These tubes are used in both endotracheal intubation and tracheostomies.
