Pressure care alternating air mattresses are specialized medical devices designed to prevent or manage pressure ulcers (commonly known as bedsores) in patients who are at risk of developing these skin and tissue injuries. These mattresses utilize a dynamic, alternating air system to redistribute a patient's weight and reduce the prolonged pressure on specific areas of the body, thereby minimizing the risk of pressure ulcers. They are commonly used in healthcare settings, such as hospitals, long-term care facilities, and home healthcare, for patients who have limited mobility or are bedridden.

Pressure care mattresses are incorporating smart technology, including sensors and connectivity, to monitor and adjust mattress settings automatically. These features can help healthcare providers track patient status and optimize pressure redistribution.
