## Abstracts

According to our (Global Info Research) latest study, the global Pressure Gas Cooler market size was valued at US\$ 6174 million in 2025 and is forecast to a readjusted size of US\$ 8588 million by 2032 with a CAGR of 4.9% during review period.

A pressure gas cooler is an industrial heat exchange device specifically designed to reduce the temperature of a pressurized gas medium. Its core working principle involves allowing high-temperature, high-pressure process gas to flow through the shell or tube side, achieving controlled cooling through indirect heat exchange with another cooling medium (typically cooling water, air, or other cryogenic fluids). Demand stems directly from the widespread process requirement of temperature control for compressed or high-pressure gases in modern industry. The upstream supply chain revolves around the manufacturing and supply of high-efficiency heat transfer elements (such as special steel pipes, fins, and plates), pressure-resistant shell materials (carbon steel/stainless steel), seals, and key components such as fans/pumps. Downstream, it is tightly integrated into the process flows of end users such as compressor manufacturers, petrochemical plants, and natural gas processing plants, with engineering companies, complete equipment suppliers, and after-sales service networks serving as hubs. In 2025, the production volume of pressure gas cooler is estimated at approximately 300,000 units, with an average selling price of approximately US\$20,000 per unit, a gross profit margin of approximately 35%, and a single-line capacity of approximately 1500 units per year.
