According to our (Global Info Research) latest study, the global Proportional Flow Valve market size was valued at US\$ 819 million in 2024 and is forecast to a readjusted size of USD 1133 million by 2031 with a CAGR of 4.7% during review period.

A proportional flow valve is a valve whose flow is proportional to the control signal. It is composed of a proportional solenoid and a flow valve. It can change the opening of the valve core (effective flow cross-sectional area) by controlling the current in the proportional solenoid coil, thereby achieving continuous proportional control of the output flow. Proportional flow valves are widely used in systems that require continuous remote control or program control of hydraulic parameters.
